

ADDITIONAL INFORMATION

Weight	3.94 kg
Dimensions	48.5 × 15.5 × 38.6 cm
Carton Qty	1
Pricing Unit	Unit/1
Size	450mm x 355mm x 145mm
Min Order Qty	1
UNSPSC Code	42192416
Tax Schedule	Taxable
Item Length	45
Item Width	35.5
Item Height	14.5
Item Measurement Unit	cm
Is Serialized Item	No
Is Dangerous Good	No

PRODUCT DESCRIPTION

The CardiAct Standard AED Cabinet is designed to keep an automated external defibrillator secure, clearly identified and ready for rapid access in an emergency. Constructed from durable metal with a quality coated finish and a clear Perspex front, it offers a professional presentation that suits workplaces, public buildings, gyms, schools and community venues. The generous internal space accommodates most popular defibrillator models while the compact outer footprint allows installation in corridors and other confined locations where every centimetre counts.

The large viewing window provides full visibility of the stored device so staff and visitors can quickly confirm the AED is present without opening the door. Prominent AED identifiers help people locate the cabinet at a glance, supporting faster response when seconds are critical. The cabinet is supplied with wall mounting brackets, making it suitable for fixed installation in offices, warehouses, reception areas and other high-traffic zones where a defibrillator should always be close at hand.

A robust stainless steel latch helps keep the AED secure while still allowing swift access when required. The latch can be used with a padlock or disposable safety seal to deter tampering and provide a visual indication that the cabinet has been opened. An optional alarm can also be added to alert responders and discourage interference, which is especially useful in unattended or public spaces. Together, these features help protect a valuable clinical asset while ensuring it is always ready for genuine emergencies.

The Perspex door and clean white finish integrate well with modern interiors, making the unit suitable for offices and customer-facing environments. The cabinet protects the defibrillator from dust and general workplace grime, helping to keep the device and its accessories in good condition between inspections. By giving the AED a dedicated, clearly marked home, organisations can improve staff awareness, support compliance with internal emergency response plans and encourage bystanders to confidently locate the device when needed at home, work or in community settings.

- **Clear visibility:** Perspex front allows quick confirmation of AED presence.
- **Durable construction:** metal body with quality coated finish for long-term use.
- **Secure access:** stainless steel latch accepts a padlock or safety seal.
- **Wall mount design:** supplied with brackets for easy installation in key locations.
- **Compact footprint:** large enough for most AEDs while fitting confined spaces.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.

Standard Wall Cabinet for PAD-350P/500P
