PRODUCT DESCRIPTION

AeroBurn Burn Gel Spray is a ready-to-use, non-aerosol hydrogel formulated for fast, soothing relief of minor burns, scalds and sunburn. The pump action delivers a fine, even layer directly to the affected area without the need to touch the skin, supporting hygienic, contact-minimised application in first aid settings. The clear gel allows easy visual monitoring of the site while providing a comforting cooling sensation.

Designed for everyday first aid through to workplace safety stations, the water-soluble gel can be rinsed off with water to reassess the injury or reapply fresh gel as required. Simple directions guide users to apply a generous layer, avoid rubbing, allow cooling for up to 30 minutes, and repeat if necessary. The compact 50 mL bottle fits conveniently into first aid kits, vehicles and grab-and-go pouches, and the non-pressurised format is suitable for storage in a wide range of environments.

Clear on-pack symbols and instructions support correct use and storage. The product is intended for minor burns only. The formulation contains propylene glycol, glycerine, silicone emulsion and carbomer to form an effective, skin-friendly hydrogel. Warnings advise discontinuing use and seeking medical attention if symptoms persist or if the burn is severe or extensive.

The pump bottle format helps reduce cross-contamination risk while enabling quick, targeted coverage over awkward areas such as shoulders, neck and forearms. The intuitive spray action supports confident use by both trained responders and the general public in time-critical situations.

AEROBURN BURN GEL SPRAY BOTTLE 50ML

ABS50

- Hygienic spray application: touch-minimised, non-aerosol pump
- Cooling comfort: formulated to soothe minor burns, scalds and sunburn
- Water-soluble: rinses off easily to reassess and reapply
- Clear gel: maintains visibility of the affected area during care
- Portable 50 mL bottle: suitable for kits, vehicles and site cabinets
