## PRODUCT DESCRIPTION

AeroBurn low-adherent burn dressings provide fast, protective coverage for thermal injuries in first aid and clinical settings. Each sterile sheet is designed to shield the wound from external contamination while remaining gentle on fragile skin. The contact side features a low-adherent surface to assist with atraumatic removal, supporting timely reassessment and changeover when required. Packaged in an easy, peel-open pouch, the dressing is ready for rapid deployment wherever it is needed—at the incident scene, in workplace first aid rooms, or during transport to definitive care.

The dressing conforms smoothly to body contours for reliable coverage on limbs and torso, helping users secure protection quickly with minimal handling. Materials are latex free to support user comfort and reduce the risk of latex-related sensitivity.

Developed for use immediately after initial burn first aid (e.g., cooling), the dressing acts as a clean barrier while the patient is stabilised and moved. The sterile presentation and clear labelling—lot, manufacturing and expiry—support inventory control for responders and healthcare providers. Multiple sizes are available across the range to match coverage needs from localised injuries to large-area protection.

- **Low-adherent contact layer:** designed to minimise trauma and assist with gentle removal
- **Sterile, single-use presentation:** individually pouched for hygiene and speed
- **Barrier protection:** helps shield the wound from environmental contaminants
- **Conforming design:** drapes to body contours for easy placement
- **Latex free:** suitable for environments where latex sensitivity is a concern
- **Peel-open pouch:** simple access during emergencies

The **Size: 75 cm × 75 cm** format provides balanced, square coverage that suits medium-area burns on limbs or torso, offering generous protection while remaining easy to position and secure.

The extra-large **75 cm × 220 cm** low-adherent burn dressing offers extended coverage suitable for long limbs or sections of torso, combining a gentle contact surface with sterile, single-use presentation for quick, hygienic protection.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
