## PRODUCT DESCRIPTION

AEROPROBE Double-Ended Splinter Probe is a compact, single-use instrument designed to assist with the precise lifting and teasing of foreign objects from superficial skin tissue. The 11 cm length supports confident fingertip control and visibility, making it suitable for first aid rooms, clinics, workplaces, schools, and onsite response kits. With a working tip available at each end, the probe gives the user options when approaching difficult angles or tight spaces around small splinters, thorns, and debris.

Built for dependable everyday performance, the disposable format helps maintain hygiene between users without cleaning steps. The smooth, lightweight shaft aids accurate, low-force manoeuvring, while the contrasting ends are easy to identify during a procedure. Bulk supply supports efficient inventory management for multi-site organisations and busy environments where splinters are a

frequent occurrence, such as workshops, hospitality venues, and outdoor programs.

AEROPROBE Double-Ended Splinter Probe pairs well with cleansing wipes, gauze, and adhesive dressings to form a complete splinter-care workflow. Its consistent quality helps ensure predictable handling characteristics across the box—useful for teams and trainers who rely on repeatable performance. The robust packaging format is suited to storerooms and mobile kits, and the compact profile fits neatly alongside other instruments in first aid cases.

- **Double-ended control:** two working tips give flexible access in tight areas.
- **Single-use hygiene:** disposable instrument supports clean practice between users.
- **Compact 11 cm length:** promotes steady handling and clear line of sight.
- **Lightweight shaft:** assists precise, low-force manoeuvring.
- **Bulk-ready:** box of 100 optimises replenishment for high-usage sites.

Packaged in a box of **100**, each probe measures **11 cm** and features a working tip at both ends. Ideal for bulk replenishment in first aid kits and clinical settings.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
