<b>Shelf Life (Months)</b>	60

## PRODUCT DESCRIPTION

AeroShield CPR Manikin Face Shield is designed to support clean, confidence-building CPR practice across schools, workplaces and community programs. The soft, transparent film sits smoothly over common manikin faces, creating a hygienic barrier while preserving clear visibility of facial landmarks. Instructors can easily observe lip seal, head tilt and chest movement, helping learners refine technique without distraction from glare or bulky equipment.

The film is engineered to feel skin-like, with consistent thickness and smooth edges that provide a comfortable contact surface during repeated practice. It conforms neatly to different manikin models, staying flat as learners reposition and adjust their grip. This helps keep attention on hand placement and effective ventilation, supporting skill development in both basic and advanced life support scenarios.

An integrated, heat-welded antimicrobial filter is positioned at the mouth area to provide added hygiene reassurance in classroom environments. The barrier is latex free and designed with a one-size fit for typical manikin designs, reducing allergen concerns and simplifying ordering for mixed training groups. Simple orientation cues printed on the shield make placement intuitive, so even first-time students can position it correctly with minimal guidance.

To keep busy classes running smoothly, AeroShield CPR Manikin Face Shield is supplied on a perforated roll housed inside a compact dispenser box. Each sheet tears off cleanly for rapid handout and quick resets between learners, supporting high-throughput sessions and tidy training stations. This efficient format makes it easy to stage multiple scenarios at once, from basic adult CPR to more complex team drills, while maintaining hygienic practice conditions.

Whether used in formal first aid courses, workplace compliance refreshers or community CPR awareness events, this training consumable offers reliable classroom performance. Instructors gain a practical, easy-to-manage solution for barrier protection, while learners experience realistic contact and clear visibility that builds confidence for real-world response.

- **Clear, skin-like film:** maintains visibility of facial landmarks for accurate seal checks.
- **Hygiene reassurance:** heat-welded antimicrobial filter positioned at the mouth area.
- **Latex free universal fit:** suitable for common manikin models in mixed training groups.
- **Easy orientation:** intuitive cues help learners position the shield correctly.
- **Perforated roll dispenser:** single-sheet tear-off supports fast, organised changeovers.

The **one size design** is tailored to fit common CPR training manikins, making it a convenient option where multiple brands and models are used across courses.

Supplied on a **roll of 36 face shields**, this option supports smooth, high-throughput CPR classes by allowing quick tear-off and distribution for each learner, reducing downtime between practice attempts and scenarios.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
