PRODUCT DESCRIPTION

AeroWipe 70% Isopropyl Alcohol Swabs provide convenient, single-use skin cleansing for everyday first aid, clinical settings and

household hygiene. Each swab is a soft, 2 ply pad saturated with 70% v/v isopropyl alcohol BP, delivering reliable antiseptic cleaning on small skin areas before minor procedures such as injections or lancet use. The compact 3 x 3 cm format supports targeted application, helping users clean exactly where it is needed without excess solution or dripping.

The alcohol solution evaporates quickly after use, leaving skin feeling clean and dry. Individually wrapped pouches help maintain the swab until it is needed, making them practical for home medicine cabinets, workplace first aid kits, travel bags and gloveboxes. The single-use design supports good hygiene practice by reducing the risk of cross contamination between patients or family members.

AeroWipe 70% Isopropyl Alcohol Swabs are suitable for both home and professional environments, including GP clinics, pathology collection centres, vaccination hubs and aged care. They are also useful around the home for quick cleaning of small touch points such as fingertips before checking blood glucose or other point-of-care tests, and for general first aid where a small, controlled antiseptic wipe is preferred. The swabs are for external use only and are designed to clean intact skin, not open wounds.

Within a first aid kit, these swabs complement items such as adhesive plasters, gauze swabs and bandages by preparing the skin before dressings are applied. In busy workplaces and on the road, the easy-tear sachets and ready-to-use format mean users can clean the skin promptly, then safely discard the used pad and wrapper.

- **70% isopropyl alcohol:** provides effective antiseptic cleaning of small skin areas.
- **Individually wrapped pads:** support hygiene and make swabs easy to carry in kits, bags and vehicles.
- **Compact 3 x 3 cm size:** ideal for targeted skin prep before injections and finger-prick tests.
- **Single-use design:** helps reduce cross contamination in home, clinical and workplace settings.
- **Versatile everyday use:** suitable for home first aid, clinics, workplaces and travel.

The **3 x 3 cm swab size** offers compact, targeted coverage that suits small areas of intact skin, making it ideal for preparing injection sites, fingertips and other focused touch points with controlled, efficient use of the 70% isopropyl alcohol solution.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
