Kits - Treatments	Burns, CPR, Dressings and Bandages, Eye Injury, Major Wounds, Minor Wounds, Snake Bite, Spider Bite
Kits - Industry	Construction / Outdoor / Remote Location
Kits - Case	Weatherproof
Is Dangerous Good	No

PRODUCT DESCRIPTION

The AeroKit MODULATOR Waterproof Tough First Aid Kit is a workplace-ready solution designed to make first aid faster, clearer, and easier to manage. Housed in a highly durable, waterproof plastic case, it helps protect critical first aid items from dust, moisture, and impact, making it suitable for harsh environments such as workshops, construction sites, warehouses, mobile service vehicles, and outdoor locations. The tough outer shell is easy to spot thanks to its bold colour and clean labelling, so responders can quickly locate the kit when time matters.

Inside the MODULATOR system, first aid is organised into six clearly defined, colour-coded soft pack modules. Each module focuses on a specific injury type—such as cuts and grazes, eye wounds, dressings and bandages, burns, snake bite, and trauma—so users can quickly select the module that matches the situation. Highly visual icons and clear wording on every module support rapid recognition,

even for less experienced first aiders or in high-stress situations.

The soft packs are made from ripstop fabric to add strength and help resist tearing through everyday handling. This construction supports repeated use during training, audits, and real incidents while keeping contents neatly contained. Each module can be removed from the outer case and taken directly to the casualty, helping responders work closer to the person who needs assistance and reducing unnecessary movement back and forth to the main kit.

The MODULATOR Waterproof Tough First Aid Kit is designed to support workplace compliance in a wide variety of settings. The system meets and exceeds standard workplace regulation contents across Australian states and territories when adequately maintained, giving employers confidence that key categories of injuries are covered. Clearly labelled layouts make it straightforward for businesses to check contents against a standard list and plan replenishment when items are used.

The modular layout also assists with post-incident review and stock control. Entire modules can be inspected and reordered as needed, supporting efficient maintenance schedules. Because the modules group related products together, it is easier for users to understand how items can be combined for care—for example, pairing bandages and dressings from the same module, or using eye pads and eyewash together from the eye wound module.

Whether installed in a fixed workplace, stored in a vehicle, or kept on hand for remote work and recreation, the MODULATOR Waterproof Tough First Aid Kit offers a structured, easy-to-navigate approach to first aid. The balance of robust protection on the outside and clear organisation on the inside helps everyone from trained first aiders to general staff respond more confidently when unexpected injuries occur.

- **Waterproof tough case:** helps protect first aid items from dust, moisture, and rough handling.
- **Colour-coded modules:** supports fast selection of the right injury-specific pack in an emergency.
- **Ripstop soft packs:** durable fabric modules help keep contents secure and organised.
- **Workplace-ready contents:** designed to meet and exceed standard workplace regulation requirements when maintained.
- **Portable and visible design:** easy to locate and carry to the point of care in busy or demanding environments.

This kit features a waterproof tough case, providing a hard-wearing outer shell that helps shield first aid supplies from dust, splashes, and impact in workplaces, vehicles, and outdoor environments.

Supplied as 1 complete kit measuring approximately 44 x 38 x 15.4 cm, this compact yet high-capacity design fits easily on shelves, in vehicles, or on workshop walls while still accommodating all six colour-coded injury modules.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
