Is Serialized Item	No
Kits - People (High Risk)	1
Kits - People (Low Risk)	25
Kits - Industry	Construction / Outdoor / Remote Location
Kits - Case	Refill
Is Dangerous Good	No

PRODUCT DESCRIPTION

The AeroKit REGULATOR Remote Work Module is designed to upgrade an existing workplace first aid kit so it better supports people who spend long periods away from immediate medical help. It brings together a focused selection of remote area essentials in one organised module, helping workplaces meet SafeWork guidance for staff who travel, work alone, or operate in isolated locations. By keeping critical items grouped in a single, easy-to-grab pack, it streamlines response when incidents occur far from clinics or hospitals.

This module is ideal for businesses with field teams, drivers, contractors, or staff who regularly work beyond standard urban environments. It is intended to be added to a compliant workplace first aid kit to strengthen coverage for burns, shock, and exposure risks that are more likely when help is delayed. The compact format supports simple placement in vehicles, site offices, and mobile kits without adding unnecessary bulk.

Each component in the REGULATOR Remote Work Module is selected to support the rapid, initial treatment of injuries in line with

typical remote work hazards. Items assist with managing burns, controlling bleeding, protecting against heat loss, and signalling for help, giving users practical options while they wait for professional care. This focused approach helps workers feel more confident knowing they have appropriate resources on hand when working at distance from support.

The module is suitable for use across a wide range of environments, including construction sites, farms, mining operations, delivery routes, community services, and home-based businesses that involve travel. It is also a useful upgrade for household and recreational first aid kits kept in 4WDs, caravans, or boats, where access to treatment can be delayed by distance or conditions. The streamlined design makes it easy to understand what the module is for at a glance so users can respond quickly in stressful situations.

By adding the REGULATOR Remote Work Module to a standard workplace first aid kit, organisations can extend their preparedness for emergencies that occur during remote or isolated work. It supports duty-of-care obligations, aligns with SafeWork remote work expectations, and helps ensure that workers have practical first aid options when professional help is not immediately available. This makes it a smart addition for any business that values safety for teams on the move.

- **Remote area focused:** boosts capability for injuries that occur far from medical care.
- **SafeWork aligned:** supports workplaces classified as remote or isolated.
- **Compact upgrade:** fits neatly into existing first aid kits in vehicles or on site.
- **Confidence for workers:** helps staff feel better prepared during field duties.
- **Versatile use:** suitable for workplaces, vehicles, outdoor activities, and home preparedness.

This configuration focuses specifically on remote and isolated work needs, making it an ideal choice when existing first aid kits must support people who spend extended periods away from clinics or hospitals.

This kit is supplied as a single remote work module, providing a complete, ready-to-add upgrade for one existing first aid kit so you can quickly extend remote area capability in a specific workplace, vehicle, or household setup.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
