Location	AU-Cameron Dr
Is Serialized Item	No
Kits - People (High Risk)	10
Kits - People (Low Risk)	25
Kits - Treatments	Snake Bite
Kits - Case	Soft Pack
Is Dangerous Good	No

PRODUCT DESCRIPTION

The AeroKit Modulator Orange Snake Bite Module is a dedicated first aid soft pack designed to support quick, confident response to

suspected snake bites in workplaces, vehicles, community settings, and outdoor environments. It forms part of the wider Modulator colour-coded first aid system, giving users a clearly labelled orange module that is easy to recognise and grab when every second counts. The compact, zippered case fits neatly into Modulator first aid kits or can be carried on its own as a focused snake bite kit for bushwalks, camping trips, farms, and worksites.

Inside the module is a carefully selected combination of dressings, bandages, gloves, and a treatment leaflet aligned with the needs of snake bite management. The Aeroform Snake Bite Bandage with Indicator provides a firm, even wrap with printed tension indicators to support correct application. A calico triangular bandage helps immobilise the limb, while low-adherent dressings protect any associated wounds without sticking to the skin. Nitrile examination gloves allow the responder to protect themselves and the casualty during treatment. A dedicated snake bite treatment leaflet offers clear guidance to help reinforce training and support calm, structured care in an emergency.

The outer case is made from durable, versatile softpack material with ripstop characteristics for added security and protection. High-visibility orange colouring, bold snake iconography, and clear "Snake Bite Module" wording make identification simple, even in low-light conditions or crowded first aid stations. The slim profile and organised internal layout help keep contents tidy and easy to locate, reducing time spent searching for individual items when the focus needs to remain on the patient.

Whether integrated into a full Modulator Series first aid kit or used as a standalone resource, this module supports workplaces, schools, sporting clubs, and outdoor enthusiasts who want practical preparedness for snake bite incidents. The intentional layout and focused contents help users move from recognition to action more smoothly, complementing existing first aid training and helping create a more organised emergency response.

- **Purpose-built design:** focused snake bite module that complements broader first aid preparation.
- **High-visibility case:** bold orange softpack and clear labelling for fast identification.
- **Targeted components:** includes snake bite bandage with indicator, triangular bandage, dressings, gloves, and guidance leaflet.
- **Organised layout:** zippered softpack keeps items together and easy to access under pressure.
- **Flexible use:** integrates with Modulator kits or functions as a standalone snake bite kit for work and outdoor activities.

This snake-bite-focused module option is tailored to support rapid response to suspected snake bites, bringing together an indicator compression bandage, triangular bandage, low-adherent dressings, nitrile gloves, and a treatment leaflet in a single, compact, easy-to-locate orange pack.

Supplied as a single module, this 20 x 10 x 6 cm softpack offers a compact footprint that fits neatly into first aid cabinets, glove boxes, backpacks, and home or workplace kits while still accommodating a full set of snake bite components.

This product is not a substitute for direct medical attention from a healthcare practitioner. Always read the label and follow the directions for use.
